

YOUR APP, OUT OF THE BOX

The standard things every POWR DATA app comes with from day one.

POWR | DATA

Before we build the parts that make your app special, every app starts from the same solid, polished base. This page shows the useful features already included, plus a few items planned for later. No technical knowledge needed.

What it does today

Your account & signing in

- Create an account with your **email and password**.
- Confirm it is really you using an **email sign-up link**.
- **Stay signed in**, so you are not typing your password every time.
- Reset a **forgotten password** by email.
- Be guided to a **strong password**, so weak ones are not accepted.
- **Change your password** any time.
- Edit your **account name**, with room for more profile details as the app grows.
- Your **login email and password** use their own secure steps.
- **Delete your account** yourself from inside the app.

Finding your way around

- A simple **menu bar** for the main sections.
- A **home screen** that greets you by name.
- A **More menu** for settings, support and app information.

Staying in the loop

- **Notifications** are in your control. Security alerts always come through; reminders, announcements and promotions can be switched on or off.
- Send **feedback** in a quick form.
- **Rate the app** in one tap.

Works everywhere

- One app for **iPhone, Android and the web**.
- Can be offered as a **website** too.
- Looks and behaves the same across all of them.

Trust, safety & your data

- Your **personal information**, including your name and email, is protected behind the scenes.
- Details that identify you, sometimes called **PII**, are handled carefully.
- When you delete your account, your personal information is **permanently removed**.
- Only **anonymous records** that cannot identify you are kept, for safety and accountability.
- Your activity is **securely recorded**.
- Only proper **admin accounts** can reach admin tools.
- Tells you when you have **lost internet**, so nothing feels broken.
- Can **prompt you to update** when an important new version is out.
- Quietly **reports crashes** so we can fix problems fast, with no personal information collected.
- Includes **branded emails**, a privacy policy and a proper delete my data path.

Planned for later

- **Two-step login**: an extra code at sign-in, sometimes called MFA or 2-factor.
- **Changing your email address** yourself. Right now your email is fixed once you sign up.
- An automatic **data breach check** for your password.
- A fuller **help and support desk**. Today the feedback form is fine to start, but it is not a full ticket system yet.
- An **in-app feedback screen** for our team to read and act on feedback faster.
